

# Requirement Gathering: Hospital Staff Survey

Project: Hospital Management System (HMS) Database Design

Target Audience: Hospital Administrators, Medical Doctors, and Receptionists

## **1. Administrative & Queue Management**

1. How do you currently track patient arrival times vs. their actual appointment time?
2. What are the primary reasons for appointment cancellations in your department?
3. How are "Emergency" cases prioritized over "Scheduled" appointments in the current manual system?

## **2. Patient Data & Medical History**

1. What specific patient vitals (e.g., BP, Heart Rate, Glucose) need to be recorded during every visit?
2. Do you often need to look up a patient's medical history from more than a year ago?
3. What information is currently missing from the paper records that would help in diagnosis?

## **3. Financial & Billing Records**

1. What is the most common payment method used by patients (Cash, Telebirr, Bank Transfer)?
2. How do you handle "Partially Paid" bills or insurance-linked payments?
3. Are there specific reports you need at the end of the month regarding department revenue?

## **4. Resource Management**

1. How do you track the occupancy of different wards (e.g., Pediatrics vs. ICU)?
2. Is there a need to track which equipment is used in which department?

## **5. Pharmacy & Prescription Management**

1. How are prescriptions currently transmitted from the doctor's office to the pharmacy?
2. Do you need to track the stock levels of specific medications within the database?
3. How do you currently handle medication refills or recurring prescriptions?

Note: This survey was used to define the tables and relationships in the `hms\_db` MySQL schema.
