

Sample Hospital Forms (Data Mapping)

This document describes the physical paper forms used to model the HMS Database.

Form A: Patient Registration & Intake

Mapped to: `Patient` table and `Patients` MongoDB collection

Fields:

- Full Name
- Date of Birth (Used for age-based analytics)
- Gender (M/F)
- Phone Number (Used as a secondary unique identifier)
- Blood Group (Critical for the `Appointment` priority logic)
- Emergency Contact Name & Phone

Form B: Doctor's Consultation Note

Mapped to: `Medical\_Record` table and `MedicalRecords` MongoDB collection

Fields:

- Date/Time of Consultation
- Main Symptoms
- Diagnosis (Text field)
- Treatment Plan (Normalized to include Medication and Dosage)
- Follow-up recommendation

Form C: Billing Invoice & Receipt

Mapped to: `Billing` and `Payment` tables

Fields:

- Bill Number (Maps to `bill\_id`)
- Consultation Fee

- Medication Fee
- Total Amount Due
- Payment Method Selection (Telebirr, CBE, Cash, etc.)
- Transaction Date

Form D: Emergency Triage & Intake

Mapped to: `Appointment` and `Medical\_Record` tables (Emergency status)

Fields:

- Arrival Mode (Ambulance/Walk-in)
- Trauma/Non-Trauma Selection
- Immediate Vital Signs (Pulse, SpO2, Responsiveness)
- Triage Level (Level 1 - Resuscitation to Level 5 - Non-urgent)
- Preliminary Diagnosis by Triage Nurse

Form E: Pharmacy Dispensing / Prescription Form

Mapped to: `Medical\_Record` details and NoSQL `prescriptions` array

Fields:

- Prescription ID
- Patient ID & Name
- Prescribing Doctor
- Medication Name & Concentration
- Dosage Instructions (e.g., QID, BID, PRN)
- Quantity Dispensed
- Date of Fulfillment
